Problem 2.1

Q prove 
$$E(x) = \frac{1}{\lambda}$$

$$E(x) = \int_{\infty}^{\infty} x f(x) dx$$

$$= \int_{\infty}^{\infty} x \int_{\infty}^{\infty} x dx$$

$$=\int_{0}^{60}\pi\lambda\,e^{-\lambda\pi}dx$$

$$=\lambda \int_{0}^{+\infty} x e^{-\lambda x} dx$$

$$=-\int_0^\infty x de^{-\lambda x}$$

$$= -\left( \pi e^{-\lambda x/4\sigma} - \int_{0}^{4\sigma} e^{-\lambda x} dx \right)$$

$$= \frac{e^{-\lambda x}}{-\lambda} \int_{0}^{+\infty}$$

$$=$$
  $0-\frac{1}{-\lambda}$
